Carbon Border Adjustment Mechanism (CBAM)

The European Union's Carbon Border Adjustment Mechanism (CBAM) aims to put a fair price on the carbon emissions of imported goods, encouraging cleaner industrial production globally. CBAM currently applies to carbon-intensive products including iron and steel, aluminum, cement, and fertilizers. Corrosion Materials supplies corrosion resistant nickel alloys, which are not currently included in CBAM.

Corrosion Materials is committed to sustainability and actively working to reduce our environmental impact through innovative practices and responsible sourcing. Our dedication to eco-friendly solutions ensures that we contribute positively to the global effort against climate change. We have several initiatives underway to enhance our environmental responsiveness. We are also working closely with our suppliers and customers to better understand and access their environmental footprint, as well as actions they are implementing to reduce their GHG emissions.

Sincerely,

Jacob Rodriguez
