

PFAS - Per and Poly Fluoroalkyl Substances

To whom it may concern,

Per and Poly Fluoroalkyl substances (PFAS) are man-made carbon and fluorine-based chemicals that have been used in a wide range of consumer and industrial products due to their resistance to grease, oil, water, and heat. PFAS include PFOA, PFOS, PTFE, FKM, PVDF. PFAS have various applications in electronic products such as protective/water-resistant coatings and do not easily degrade. They are persistent and bio-accumulative in nature, and so are referred to as forever chemicals.

There is no PFAS present in the alloy products distributed by Corrosion Materials.
