

Persistent Organic Pollutants (POP) EU 2019/1021

To whom it may concern,

Persistent organic pollutants (P.O.P's) are organic substances that persist in the environment, accumulate in living organisms, and pose a risk to our health and the environment. They can be transported by air, water, or migratory species across international borders, reaching regions where they have never been produced or used. International risk management is necessary as no region can manage the risks posed by these substances alone. P.O.P's are regulated by the Stockholm Convention and the Aarhus Protocol worldwide and which are implemented in the European Union through the Regulation (EU) No 2019/1021.

None of the entries present on the current list of regulated chemicals/substances are found in the products distributed by Corrosion Materials.

[List of substances subject to POPs Regulation - ECHA \(europa.eu\)](https://european-council.europa.eu/media/en/pdfs/doc/12/122025/12202501_en12.pdf)

This information is based on the POP list updated September 16 2025.
